Dear Hiring Manager,

I am excited to be considered for a 4 month coop opportunity at your organization. Working as a software developer has always been an aspiration of mine and it is amazing to witness how business has changed over the last decade with the development of the internet. I strive to be a part of this change so that the services you offer are more accessible and convenient for everyone while also enabling people to grow their own businesses and enjoy a prosperous life!

I am currently in my third semester at Seneca College for the program Computer Programming and Analysis that I started in January of 2021 and have maintained a 4.0 GPA throughout the program. It has been a tough few years and the pandemic has taught me to be resilient and never give up. I'm currently building a few web applications by learning the material on my own that will be taught in a few semesters down the road. I enjoy working independently as well as in a group to create useful projects that can be adapted and configured to work in a variety of settings for larger scale projects. I have explored the React framework and made some simple projects like a To Do list application (can be viewed on Heroku: <https://intense-depths-30796.herokuapp.com/>) and an anonymous forum posting application using the latest encryption and authentication methods (<https://hidden-earth-93222.herokuapp.com/>). I also collaborated with a group of 5 people during the Bell sponsored Hackathon to create an environmentally sustainable solution using technology (<https://rocky-anchorage-47766.herokuapp.com/>). Previously, I was working as an account manager at a staffing firm where I learned to communicate effectively and listen attentively to meet and exceed the clients expectations. I characterize myself as an extremely hard worker that's willing to go above and beyond because I know that many people depend on the work that I do and I'll be making a lot of people really happy by getting my assignments finished ahead of schedule. Time management is one of my strongest skills that I acquired during my time at the University of Waterloo where I studied the natural sciences while also juggling a few teaching assistant roles and working in residence as a community leader. I've learned to be engaging and thoughtful while also fostering an environment where students can create connections to make school life more enjoyable. I love to create and build out tools and projects so that we can increase efficiencies and have a more interconnected world.

I am available to interview this upcoming Tuesday and Thursday.

Looking forward to meeting with you.

Best Regards,
